### IMPORTED SEEDS

Though the war in Germany has been over for some months no trade relations of any kind have as yet been arranged for. If the same measuring rod is applied to Japan it is doubtful if seeds of Oriental origin will reach us in time for fall sowing. Let us make a record however of what you would want in case of an unexpected break.

## EARLIER TOMATOES!

The newly-discovered plant hormone in Seed-less-Set makes fruit develop quicker. That is, if you take two identical blossoms on a plant, spray one of them with the hormone, and pollinate the other naturally, the hormone treated blossom will produce a ripe tomato five to ten days earlier. The hormone fertilizes and stimulates the fruit producing organs of the flower so much that during the first few days after application you can actually see the difference in growth.

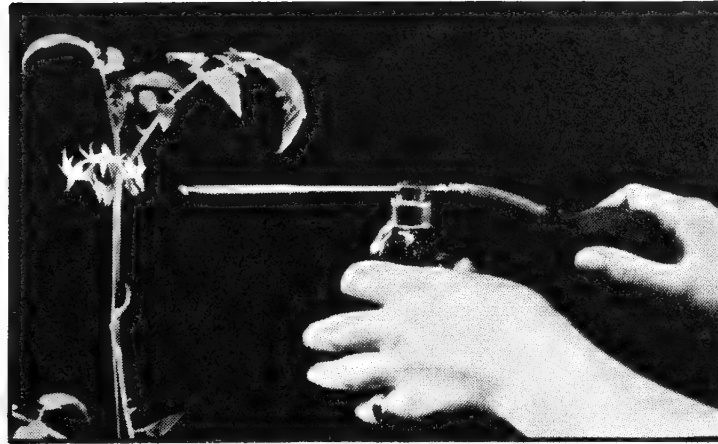

## BLOSSOMS STAY ON!

Boyce Thompson Institute for Plant Research has discovered that even under the ideal fruit setting weather of midsummer, only 82% of tomato flowers ever produce fruit. The hormone of Seed-less-Set caused fruit on every flower! When only 82% set fruit under favorable conditions, what happens during the cool, damp, raw days of early spring? You probably have observed that the flowers just drop off, cluster after flower cluster, often for weeks. You probably have even set out pot grown tomatoes, with flowers on in May, that have not ripened fruits until August. Yet it is normal for tomatoes to mature in only forty to fifty days. Flowers sprayed with Seed-less-Set do not fall off, and set regular sized fruit faster! You can have juicy red tomatoes before your neighbors can, with any variety you wish!

## SEEDLESS TOMATOES!

You have probably tried many different varieties of tomatoes. Most have some quality that is different, or specially appeals to you in some way! Now picture your favorite variety without seeds. It has firmer flesh. The flavor is better. No seeds to stick in your teeth. Surpris-

ingly, you have more perfectly shaped, large tomatoes, practically no crippled runts. Seed-less-Set does this. It is "Scientifically Correct."

## JUST SPRAY THE FLOWERS

*NOT THE WHOLE PLANT.* The procedure? Simple enough. Just put Seed-less-Set in an atomizer and spray your tomato blossoms once or twice a week with it. You don't have to hit any particular part of them, as back or front, top or bottom it is all the same to the hormone. It will even penetrate the flower stems. Even if a bee has visited the flower and caused natural pollenization, the hormone can be absorbed by the flower stem, so that it reaches the ovaries of the flower before the effects of the natural pollen.

**Cucumbers, melons, squash, peppers, holly berries, pears, etc.**

Scientific work has been done with Seed-less-Set hormone on many other plants. Peppers and cucumbers are affected very favorably. Holly sets its berries (they are seedless) very heavily. There are indications that even trees that ordinarily require ones of a different sex planted nearby to affect setting of fruit, do so after spraying with Seed-less-Set.

Money back guarantee if you are not satisfied. Remember, Seed-less-Set is "Scientifically Correct."
